Les Q-Codes

Marc Jamouille
Médecin de famille,
Spécialiste en gestion de données de santé
Membre du WICC
Espace Temps maison de santé,
Charleroi , Belgique

marc.jamouille@doct.ulg.ac.be

Je ne parle ici que des Q-Codes

- En réalité le projet s'appelle 3CGP (pour Core Content Classification in GP/FM)
- Il s'agit de l'assemblage de ICPC et des Q-Codes
- La CISP pour la clinique
- Les Q-Codes pour l'organisation du métier
- Gaetan Kerdelhue vous dira le travail d'alignement MeSH de ICPC qu'il a fait pendant que moi je préparais les Q-Codes
- Voir <http://docpatient.net/3CGP>

Une table des matières pour la médecine générale?

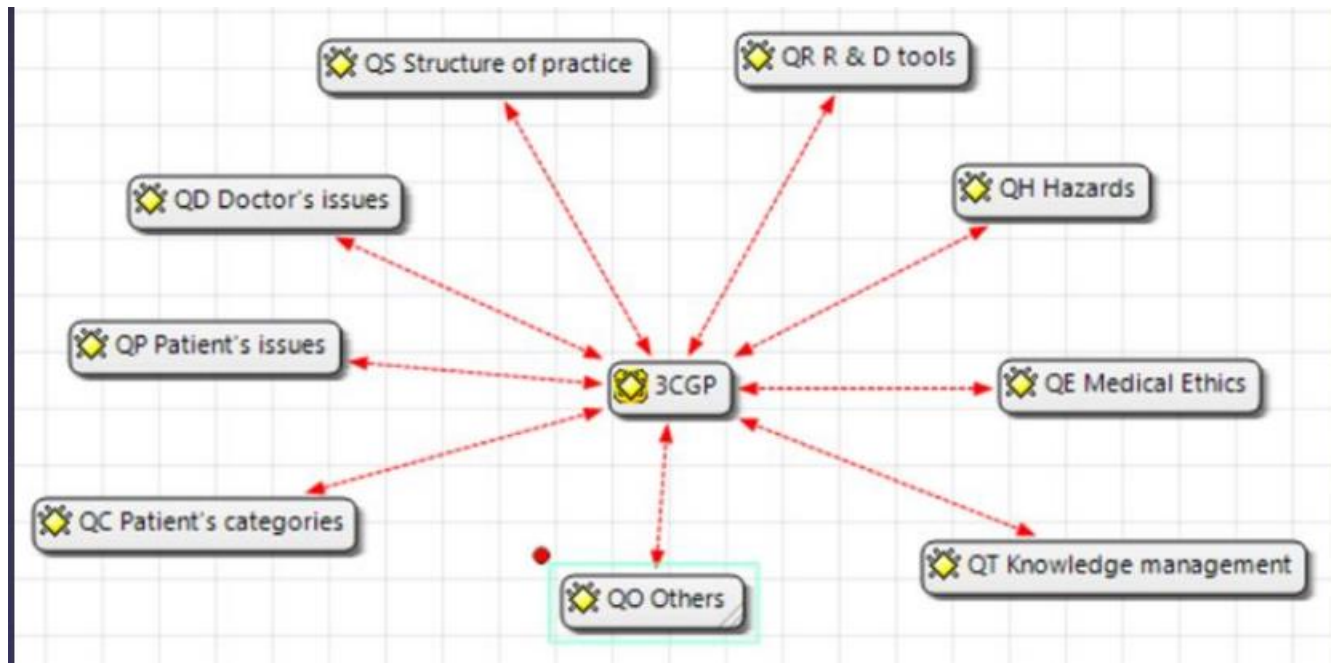

- Il existe des définitions consensuelles de la médecine générale et de famille ou des soins de santé primaires
- Il existe d'innombrables textbooks en GP/FM
 - ❖ Ils contiennent tous des items cliniques
 - ❖ Et des items non cliniques
 - ❖ Ils sont tous différents
- Wonca Europe a 20.000 abstracts en ligne
 - ❖ Sans système d'indexation

Elaboration d'une liste d'autorité

- J'ai analysé le contenu de 1600 abstracts de médecine de famille
- Progressivement de 2007 à 2015
- Il s'agit en fait d'analyse qualitative qui permet d'identifier les concepts
- Dans le monde informatique cette façon de faire porte le nom de **Text Classification** mais aussi de **Topic List** et d'autres encore
- Actuellement ce sont des machines qui font ça par NLP sur base d'Ontologies

Moi, j'ai voulu voir le contenu de mon métier

- J'ai repéré un peu moins de 200 concepts. A ce jour 184
- Evidement il y en a qui manquent
- Je les ai ordonnancé en 8 catégories et un catégorie « autre »
- Ils sont disponibles en 7 langues ; en / fr / es / pt / nl / vn / tr

Grace à l'aide de Stefan, Gaetan , Julien, Arthur et Melissa j'ai pu étudié leur contenu

- Interface d'édition sur HETOP
- Interface graphique d'élaboration DBGUI
- Mise en relation possible avec les terminologies Hetop par système automatique et semi-automatique
- Identification des MeSH (if any) et des Entry terms
- Recherche de contenu conceptuel
- Recherche d'articles biblio Full Free Access
- Recherche de correspondances sur Babelnet et Dbpedia
- Un an de travail
- Actuellement en révision (avec l'aide d'Arthur et Melissa)
- Projet de lier à DeCS (une autre histoire → voir Stefan)

60 "QD446 " "disease mongering "

Melissa's comments: In your paper "The words of prevention, part II: ten terms in the realm of quaternary prevention," you noted that there are no MeSH terms for "disease mongering." I also checked for other terms and did not find any appropriate terms. I even searched PubMed for "disease mongering" and reviewed the articles for MeSH terms.

Melissa's recommendations: I recommend the following PubMed search: "disease mongering"[tiab].

61 "QD447 " "overscreening "

Melissa's comments: MeSH covers many types of screening. But, overscreening is not available in MeSH. I looked at the MeSH term "Mass Screening," which is defined as: "Organized periodic procedures performed on large groups of people for the purpose of detecting disease." But, this is not equivalent to overscreening. I performed the following search: "unnecessary screening"[tiab] OR "overscreening"[tiab]. Some articles about overscreening in chemistry are mixed in with articles about medical overscreening. This was also true when I performed a search with each term individually.

Melissa's recommendation: I recommend the following search: "unnecessary screening"[tiab] OR "overscreening"[tiab].

Melissa P. Resnick, M.S., M.L.S.

Ph.D. Candidate, Health Informatics

3-CGP conceptual content

Collection of descriptors encompassing specific centers of interest of family doctors identified in abstracts of communications during congresses of family doctors. To be completed. In association with ICPC-2 they form 3CGP, Core Content Classification in General Practice/Family medicine. 3CGP allows to index probably most of family doctor's gray literature. Work in progress

3-CGP conceptual content

COMORBIDITY other diseases or health problems in addition to that being studied or dealt with.(Woncadic)

Multimorbidity : is defined as any combination of chronic disease with at least one other disease (acute or chronic) or biopsychosocial factor (associated or not) or somatic risk factor. Any biopsychosocial factor, any risk factor, the social network, the burden of diseases, the health care consumption, and the patient's coping strategies may function as modifiers (of the effects of multimorbidity). Multimorbidity may modify the health outcomes and lead to an increased disability or a decreased quality of life or frailty.(Le Reste et al 2013)

Multimorbidity ; The co-existence of two or more chronic conditions, where one is not necessarily more central than the others (Boyd & all 2010)

Sebastien Rigaux . Multi-label text classification of medical abstracts. Master thesis. ULg. 2015.

Université de Liège - Faculté des Sciences Appliquées

Multi-Label Text Classification of Medical Abstracts

Travail de fin d'études réalisé en vue de l'obtention du grade de
Master en Sciences Informatiques

F-1 score 0,4

Sur base des 500 abstracts analysé pour CNGE 2013 et 2014

Donc pour finir, j'ai une base de connaissance

- Qui vaut ce qu'elle vaut (un seul observateur-vision européenne – nombreux biais possibles)
- Mais dans le genre bottom-up, c'est la seule (précédent; FAMLY 1992 et GP LIT 1998)
- Qui intéresse plein de gens, (d'où le nombre de traductions)
- Surtout les étudiants en médecine de famille
- Qui peut être évolutive
- Qui peut se prêter à la NLP
- J'ai le projet d'en faire un livre (pour les humains sans Internet)
- Et une ontologie (pour les machines)
- Mais ça c'est pour 2017 (pour mes 70 ans 😊)
